

114TH CONGRESS  
1ST SESSION

# S. 1202

To amend the Public Utility Regulatory Policies Act of 1978 to assist States in adopting updated interconnection procedures and tariff schedules and standards for supplemental, backup, and standby power fees for projects for combined heat and power technology and waste heat to power technology, and for other purposes.

---

## IN THE SENATE OF THE UNITED STATES

MAY 6, 2015

Mrs. SHAHEEN introduced the following bill; which was read twice and referred to the Committee on Energy and Natural Resources

---

# A BILL

To amend the Public Utility Regulatory Policies Act of 1978 to assist States in adopting updated interconnection procedures and tariff schedules and standards for supplemental, backup, and standby power fees for projects for combined heat and power technology and waste heat to power technology, and for other purposes.

1       *Be it enacted by the Senate and House of Representa-*  
2       *tives of the United States of America in Congress assembled,*

3       **SECTION 1. SHORT TITLE.**

4       This Act may be cited as the “Heat Efficiency  
5       through Applied Technology Act” or the “HEAT Act”.

1   **SEC. 2. FINDINGS.**

2       Congress finds that—

3               (1) combined heat and power technology, also  
4               known as cogeneration, is a technology that effi-  
5               ciently produces electricity and thermal energy at  
6               the point of use of the technology;

7               (2) by combining the provision of both elec-  
8               tricity and thermal energy in a single step, combined  
9               heat and power technology makes significantly more-  
10               efficient use of fuel, as compared to separate genera-  
11               tion of heat and power, which has significant eco-  
12               nomic and environmental advantages;

13               (3) waste heat to power is a technology that  
14               captures heat discarded by an existing industrial  
15               process and uses that heat to generate power with  
16               no additional fuel and no incremental emissions, re-  
17               ducing the need for electricity from other sources  
18               and the grid, and any associated emissions;

19               (4) waste heat or waste heat to power is consid-  
20               ered renewable energy in 17 States;

21               (5)(A) a 2012 joint report by the Department  
22               of Energy and the Environmental Protection Agency  
23               estimated that by achieving the national goal out-  
24               lined in Executive Order 13624 (77 Fed. Reg.  
25               54779) (September 5, 2012) of deploying 40  
26               gigawatts of new combined heat and power tech-

1 nology by 2020, the United States would increase  
2 the total combined heat and power capacity of the  
3 United States by 50 percent in less than a decade;  
4 and

5 (B) additional efficiency would—

6 (i) save 1,000,000,000,000,000 BTUs of

7 energy; and

8 (ii) reduce emissions by 150,000,000 metric  
9 tons of carbon dioxide annually, a quantity  
10 equivalent to the emissions from more than  
11 25,000,000 cars;

12 (6) a 2012 report by the Environmental Protection  
13 Agency estimated the amount of waste heat  
14 available at a temperature high enough for power  
15 generation from industrial and nonindustrial applications  
16 represents an additional 10 gigawatts of  
17 electric generating capacity on a national basis;

18 (7) distributed energy generation, including  
19 through combined heat and power technology and  
20 waste heat to power technology, has ancillary benefits,  
21 such as—

22 (A) removing load from the electricity distribution grid; and

23 (B) improving the overall reliability of the  
24 electricity distribution system; and

(B) a 2008 study by Oak Ridge National Laboratory identified interconnection issues, regulated fees and tariffs, and environmental permitting as areas that could be streamlined with respect to the provision of combined heat and power technology and waste heat to power technology.

## 10 SEC. 3. DEFINITIONS.

11 (a) IN GENERAL.—In this Act:

(2) OUTPUT-BASED EMISSION STANDARD.—The term “output-based emission standard” means a standard that relates emissions to the electrical, thermal, or mechanical productive output of a device

1       or process rather than the heat input of fuel burned  
2       or pollutant concentration in the exhaust.

3                     (3) QUALIFIED WASTE HEAT RESOURCE.—

4                     (A) IN GENERAL.—The term “qualified  
5       waste heat resource” means—

6                         (i) exhaust heat or flared gas from  
7       any industrial process;

8                         (ii) waste gas or industrial tail gas  
9       that would otherwise be flared, incinerated,  
10      or vented;

11                         (iii) a pressure drop in any gas for an  
12      industrial or commercial process; or

13                         (iv) any other form of waste heat re-  
14      source as the Secretary may determine.

15                     (B) EXCLUSION.—The term “qualified  
16      waste heat resource” does not include a heat re-  
17      source from a process the primary purpose of  
18      which is the generation of electricity using a  
19      fossil fuel.

20                     (4) WASTE HEAT TO POWER TECHNOLOGY.—

21       The term “waste heat to power technology” means  
22      a system that generates electricity through the re-  
23      covery of a qualified waste heat resource.

1       (b) PURPA DEFINITIONS.—Section 3 of the Public  
2 Utility Regulatory Policies Act of 1978 (16 U.S.C. 2602)  
3 is amended by adding at the end the following:

4           “(22) COMBINED HEAT AND POWER TECH-  
5 NOLOGY.—The term ‘combined heat and power tech-  
6 nology’ means the generation of electric energy and  
7 heat in a single, integrated system that meets the ef-  
8 ficiency criteria in clauses (ii) and (iii) of section  
9 48(c)(3)(A) of the Internal Revenue Code of 1986,  
10 under which heat that is conventionally rejected is  
11 recovered and used to meet thermal energy require-  
12 ments.

13           “(23) QUALIFIED WASTE HEAT RESOURCE.—

14           “(A) IN GENERAL.—The term ‘qualified  
15 waste heat resource’ means—

16              “(i) exhaust heat or flared gas from  
17 any industrial process;

18              “(ii) waste gas or industrial tail gas  
19 that would otherwise be flared, incinerated,  
20 or vented;

21              “(iii) a pressure drop in any gas for  
22 an industrial or commercial process; or

23              “(iv) any other form of waste heat re-  
24 source as the Secretary may determine.

1                 “(B) EXCLUSION.—The term ‘qualified  
2                 waste heat resource’ does not include a heat re-  
3                 source from a process the primary purpose of  
4                 which is the generation of electricity using a  
5                 fossil fuel.

6                 “(24) WASTE HEAT TO POWER TECHNOLOGY.—  
7                 The term ‘waste heat to power technology’ means a  
8                 system that generates electricity through the recov-  
9                 ery of a qualified waste heat resource.”.

10 **SEC. 4. UPDATED INTERCONNECTION PROCEDURES AND  
11 TARIFF SCHEDULE.**

12                 (a) ADOPTION OF STANDARDS.—Section 111(d) of  
13 the Public Utility Regulatory Policies Act of 1978 (16  
14 U.S.C. 2621(d)) is amended by adding at the end the fol-  
15 lowing:

16                 “(20) UPDATED INTERCONNECTION PROCE-  
17 DURES AND TARIFF SCHEDULE.—

18                 “(A) IN GENERAL.—Not later than 1 year  
19 after the date of enactment of this paragraph,  
20 the Secretary, in consultation with the Commis-  
21 sion and other appropriate agencies, shall es-  
22 tablish, for generation with nameplate capacity  
23 up to 20 megawatts using all fuels—

24                         “(i) guidance for technical inter-  
25 connection standards that ensure inter-

1           operability with existing Federal inter-  
2           connection rules;

3           “(ii) model interconnection proce-  
4           dures, including appropriate fast track pro-  
5           cedures; and

6           “(iii) model rules for determining and  
7           assigning interconnection costs.

8           “(B) STANDARDS.—The standards estab-  
9           lished under subparagraph (A) shall, to the  
10          maximum extent practicable, reflect current  
11          best practices (as demonstrated in model codes  
12          and rules adopted by States) to encourage the  
13          use of distributed generation (such as combined  
14          heat and power technology and waste heat to  
15          power technology) while ensuring the safety and  
16          reliability of the interconnected units and the  
17          distribution and transmission networks to which  
18          the units connect.

19           “(C) VARIATIONS.—In establishing the  
20          model standards under subparagraph (A), the  
21          Secretary shall consider the appropriateness of  
22          using standards or procedures that vary based  
23          on unit size, fuel type, or other relevant charac-  
24          teristics.”.

25           (b) COMPLIANCE.—

1                             (1) TIME LIMITATIONS.—Section 112(b) of the  
2                             Public Utility Regulatory Policies Act of 1978 (16  
3                             U.S.C. 2622(b)) is amended by adding at the end  
4                             the following:

5                             “(7)(A) Not later than 90 days after the date  
6                             on which the Secretary completes the standards re-  
7                             quired under section 111(d)(20), each State regu-  
8                             latory authority (with respect to each electric utility  
9                             for which the authority has ratemaking authority)  
10                            and each nonregulated electric utility shall com-  
11                            mence the consideration referred to in that section,  
12                            or set a hearing date for such consideration, with re-  
13                            spect to each standard.

14                            “(B) Not later than 2 years after the date on  
15                            which the Secretary completes the standards re-  
16                            quired under section 111(d)(20), each State regu-  
17                            latory authority (with respect to each electric utility  
18                            for which the authority has ratemaking authority)  
19                            and each nonregulated electric utility shall—

20                             “(i) complete the consideration under sub-  
21                             paragraph (A);

22                             “(ii) make the determination referred to in  
23                             section 111 with respect to each standard es-  
24                             tablished under section 111(d)(20); and

1                 “(iii) submit to the Secretary and the  
2                 Commission a report detailing the updated  
3                 plans of the State regulatory authority for  
4                 interconnection procedures and tariff schedules  
5                 that reflect best practices to encourage the use  
6                 of distributed generation.”.

7                 (2) FAILURE TO COMPLY.—Section 112(c) of  
8                 the Public Utility Regulatory Policies Act of 1978  
9                 (16 U.S.C. 2622(c)) is amended by adding at the  
10                 end the following: “In the case of each standard es-  
11                 tablished under paragraph (20) of section 111(d),  
12                 the reference contained in this subsection to the date  
13                 of enactment of this Act shall be deemed to be a ref-  
14                 erence to the date of enactment of that paragraph  
15                 (20).”.

16                 (3) PRIOR STATE ACTIONS.—

17                 (A) IN GENERAL.—Section 112 of the  
18                 Public Utility Regulatory Policies Act of 1978  
19                 (16 U.S.C. 2622) is amended by adding at the  
20                 end the following:

21                 “(g) PRIOR STATE ACTIONS.—Subsections (b) and  
22                 (c) shall not apply to a standard established under para-  
23                 graph (20) of section 111(d) in the case of any electric  
24                 utility in a State if, before the date of enactment of this  
25                 subsection—

1           “(1) the State has implemented for the electric  
2       utility the standard (or a comparable standard);

3           “(2) the State regulatory authority for the  
4       State, or the relevant nonregulated electric utility,  
5       has conducted a proceeding after December 31,  
6       2013, to consider implementation of the standard  
7       (or a comparable standard) for the electric utility; or

8           “(3) the State legislature has voted on the im-  
9       plementation of the standard (or a comparable  
10      standard) for the electric utility.”.

11           (B) CROSS-REFERENCE.—Section 124 of  
12       the Public Utility Regulatory Policies Act of  
13       1978 (16 U.S.C. 2634) is amended by adding  
14       at the end the following: “In the case of each  
15       standard established under paragraph (20) of  
16       section 111(d), the reference contained in this  
17       subsection to the date of enactment of this Act  
18       shall be deemed to be a reference to the date  
19       of enactment of that paragraph (20).”.

20 **SEC. 5. SUPPLEMENTAL, BACKUP, AND STANDBY POWER  
21           FEES OR RATES.**

22           (a) ADOPTION OF STANDARDS.—Section 111(d) of  
23       the Public Utility Regulatory Policies Act of 1978 (16  
24       U.S.C. 2621(d)) (as amended by section 4(a)) is amended  
25       by adding at the end the following:

1           “(21) SUPPLEMENTAL, BACKUP, AND STANDBY  
2       POWER FEES OR RATES.—

3           “(A) IN GENERAL.—Not later than 1 year  
4       after the date of enactment of this paragraph,  
5       the Secretary, in consultation with the Commis-  
6       sion and other appropriate agencies, shall es-  
7       tablish model rules and procedures for deter-  
8       mining fees or rates for supplementary power,  
9       backup or standby power, maintenance power,  
10      and interruptible power supplied to facilities  
11      that operate combined heat and power tech-  
12      nology and waste heat to power technology that  
13      appropriately allow for adequate cost recovery  
14      by an electric utility but are not excessive.

15           “(B) FACTORS.—In establishing model  
16      rules and procedures for determining fees or  
17      rates described in subparagraph (A), the Sec-  
18      retary shall consider—

19           “(i) the best practices that are used to  
20      model outage assumptions and contin-  
21      gencies to determine the fees or rates;

22           “(ii) the appropriate duration, mag-  
23      nitude, or usage of demand charge ratch-  
24      ets;

1                         “(iii) the benefits to the utility and  
2                         ratepayers, such as increased reliability,  
3                         fuel diversification, enhanced power qual-  
4                         ity, and reduced electric losses from the  
5                         use of combined heat and power technology  
6                         and waste heat to power technology by a  
7                         qualifying facility; and

8                         “(iv) alternative arrangements to the  
9                         purchase of supplementary, backup, or  
10                         standby power by the owner of combined  
11                         heat and power technology and waste heat  
12                         to power technology generating units if the  
13                         alternative arrangements—

14                         “(I) do not compromise system  
15                         reliability; and

16                         “(II) are nondiscretionary and  
17                         nonpreferential.”.

18                 (b) COMPLIANCE.—

19                         (1) TIME LIMITATIONS.—Section 112(b) of the  
20                         Public Utility Regulatory Policies Act of 1978 (16  
21                         U.S.C. 2622(b)) (as amended by section 4(b)(1)) is  
22                         amended by adding at the end the following:

23                         “(8)(A) Not later than 90 days after the date  
24                         on which the Secretary completes the standards re-  
25                         quired under section 111(d)(21), each State regu-

1       latory authority (with respect to each electric utility  
2       for which the authority has ratemaking authority)  
3       and each nonregulated electric utility shall com-  
4       mence the consideration referred to in that section,  
5       or set a hearing date for such consideration, with re-  
6       spect to each standard.

7           “(B) Not later than 2 years after the date on  
8       which the Secretary completes the standards re-  
9       quired under section 111(d)(21), each State regu-  
10      latory authority (with respect to each electric utility  
11      for which the authority has ratemaking authority)  
12      and each nonregulated electric utility shall—

13           “(i) complete the consideration under sub-  
14       paragraph (A);

15           “(ii) make the determination referred to in  
16       section 111 with respect to each standard es-  
17       tablished under section 111(d)(21); and

18           “(iii) submit to the Secretary and the  
19       Commission a report detailing the updated  
20       plans of the State regulatory authority for sup-  
21       plemental, backup, and standby power fees that  
22       reflect best practices to encourage the use of  
23       distributed generation.”.

24           (2) FAILURE TO COMPLY.—Section 112(c) of  
25       the Public Utility Regulatory Policies Act of 1978

1       (16 U.S.C. 2622(c)) (as amended by section 4(b)(2))  
2       is amended by adding at the end the following: “In  
3       the case of each standard established under para-  
4       graph (21) of section 111(d), the reference con-  
5       tained in this subsection to the date of enactment of  
6       this Act shall be deemed to be a reference to the  
7       date of enactment of that paragraph (21).”.

8                 (3) PRIOR STATE ACTIONS.—

9                     (A) IN GENERAL.—Section 112 of the  
10                  Public Utility Regulatory Policies Act of 1978  
11                  (16 U.S.C. 2622) (as amended by section  
12                  4(b)(3)(A)) is amended by adding at the end  
13                  the following:

14                  “(h) PRIOR STATE ACTIONS.—Subsections (b) and  
15                  (c) shall not apply to a standard established under para-  
16                  graph (21) of section 111(d) in the case of any electric  
17                  utility in a State if, before the date of enactment of this  
18                  subsection—

19                     “(1) the State has implemented for the electric  
20                  utility the standard (or a comparable standard);

21                     “(2) the State regulatory authority for the  
22                  State, or the relevant nonregulated electric utility,  
23                  has conducted a proceeding after December 31,  
24                  2013, to consider implementation of the standard  
25                  (or a comparable standard) for the electric utility; or

1               “(3) the State legislature has voted on the im-  
2       plementation of the standard (or a comparable  
3       standard) for the electric utility.”.

4               (B) CROSS-REFERENCE.—Section 124 of  
5       the Public Utility Regulatory Policies Act of  
6       1978 (16 U.S.C. 2634) (as amended by section  
7       4(b)(3)(B)) is amended by adding at the end  
8       the following: “In the case of each standard es-  
9       tablished under paragraph (21) of section  
10      111(d), the reference contained in this sub-  
11      section to the date of enactment of this Act  
12      shall be deemed to be a reference to the date  
13      of enactment of that paragraph (21).”.

14 **SEC. 6. UPDATING OUTPUT-BASED EMISSIONS STANDARDS.**

15       (a) ESTABLISHMENT.—The Administrator of the En-  
16      vironmental Protection Agency (referred to in this section  
17      as the “Administrator”) shall establish a program under  
18      which the Administrator shall provide to each State (as  
19      defined in section 302 of the Clean Air Act (42 U.S.C.  
20      7602)) that elects to participate and that submits an ap-  
21      plication under subsection (b) a grant for use by the State  
22      in accordance with subsection (c).

23       (b) APPLICATION.—To be eligible to receive a grant  
24      under this section, a State shall submit to the Adminis-  
25      trator an application at such time, in such manner, and

1 containing such information as the Administrator may re-  
2 quire.

3 (c) USE OF FUNDS.—

4 (1) IN GENERAL.—A State shall use a grant  
5 provided under this section—

6 (A) to update any applicable State or local  
7 air permitting regulations under this title to in-  
8 corporate environmental regulations relating to  
9 output-based emissions in accordance with rel-  
10 evant guidelines developed by the Administrator  
11 under paragraph (2); or

12 (B) if the State has already updated all  
13 applicable State and local permitting regula-  
14 tions to incorporate those output-based emis-  
15 sions environmental regulations, to expedite the  
16 processing of relevant power generation permit  
17 applications under this title.

18 (2) GUIDELINES.—As soon as practicable after  
19 the date of enactment of this Act, the Administrator  
20 shall publish guidelines for updating State and local  
21 permitting regulations under this Act that—

22 (A) provide credit, in the calculation of the  
23 emission rate of the facility, for any thermal en-  
24 ergy produced by combined heat and power

1           technology or waste heat to power technology;

2           and

3           (B) apply only to generation units that

4           produce 5 megawatts of electrical energy or

5           less.

6           (d) MAXIMUM AMOUNT.—The amount of a grant pro-

7 vided under this section shall not exceed \$100,000.

8           (e) AUTHORIZATION OF APPROPRIATIONS.—There is

9 authorized to be appropriated to the Administrator to

10 carry out this section \$5,000,000.

○
